

Rice Disease: Brown Spot

Metadata

Crop: Rice
Disease: Brown Spot
Scientific Name: *Bipolaris oryzae*
Pathogen: Fungus
Source: TNAU, ICAR

Overview

Brown Spot is a fungal disease causing brown lesions on rice leaves and reducing yield.

Symptoms

Early: Small brown spots.
Advanced: Oval lesions with gray centers.

Similar Diseases

Blast: spindle-shaped lesions.
Leaf streak: linear lesions.

Favorable Conditions

High humidity, nutrient deficiency, drought stress.

Transmission

Seed-borne and spread via spores.

Management

Cultural: Use healthy seeds, field sanitation.
Chemical: Mancozeb.

Prevention

Balanced fertilization, resistant varieties.

Severity

Mild: scattered spots.

Severe: leaf drying and yield loss.

Recommended Action

Treat seeds and apply fungicides early.
