

Rice Disease: Leaf Blast

Metadata

Crop: Rice
Disease: Leaf Blast
Scientific Name: *Magnaporthe oryzae*
Pathogen: Fungus
Source: FAO, ICAR

Overview

Leaf Blast is a major fungal disease causing lesions on rice leaves.

Symptoms

Early: Small gray-green spots.
Advanced: Spindle-shaped lesions with white centers.

Similar Diseases

Brown Spot: round lesions.
Neck Blast: affects panicle.

Favorable Conditions

High humidity, excess nitrogen.

Transmission

Airborne spores.

Management

Cultural: Proper spacing, reduce nitrogen.
Chemical: Tricyclazole.

Prevention

Resistant varieties, balanced nutrients.

Severity

Mild: few lesions.

Severe: leaf drying.

Recommended Action

Apply fungicides and manage nutrients.
