

Rice Disease: Neck Blast

Metadata

Crop: Rice
Disease: Neck Blast
Scientific Name: Magnaporthe oryzae
Pathogen: Fungus
Source: ICAR, FAO

Overview

Neck Blast affects the panicle neck leading to grain loss.

Symptoms

Early: discoloration at neck.
Advanced: panicle breakage, empty grains.

Similar Diseases

Leaf Blast: leaf lesions.
Bacterial diseases: different symptoms.

Favorable Conditions

High humidity during flowering.

Transmission

Spores spread by wind.

Management

Cultural: balanced fertilization.
Chemical: Fungicides like tricyclazole.

Prevention

Resistant varieties.

Severity

Severe yield loss due to grain sterility.

Recommended Action

Protect crop during flowering stage.
