

Wheat Disease: Brown Rust

Metadata

Crop: Wheat
Disease: Brown Rust
Scientific Name: *Puccinia triticina*
Pathogen: Fungus
Source: ICAR, FAO

Overview

Brown Rust causes orange-brown pustules on wheat leaves reducing yield.

Symptoms

Early: small orange spots.
Advanced: scattered pustules on leaves.

Favorable Conditions

Moderate temperatures and humidity.

Management

Cultural: resistant varieties.
Chemical: fungicides.

Prevention

Timely sowing and monitoring.

Recommended Action

Apply fungicides at early stage.
